

Sprue Grinding

Dry Sprue Grinding Machine

Description :

The Dry Sprue Grinding Machine stands as a pinnacle of efficiency in precise sprue grinding operations, meticulously crafted for handling dry materials with finesse. Featuring an array of cutting-edge components, this machine ensures optimal performance and cleanliness in the grinding process.

- **High-Power Dust Collector:** Driven by a robust blower, the machine boasts heavy suction capabilities, effectively gathering dust and debris produced during the grinding process.
- **Advanced Filtration System:** Utilizing a specialized 5-micron filter bag, this machine excels in capturing fine particles, maintaining a pristine working environment for seamless operations.
- **1/2HP Pedestal Motor:** Engineered with a high-performance 1/2HP motor operating at 2800rpm, this machine employs a 7-inch long grinding spindle and wheel, ensuring precise and efficient sprue grinding tasks.
- **Material Versatility:** Designed to handle dry materials such as acrylic Hood, this machine accommodates varying thicknesses while incorporating a light reflector feature, optimizing visibility during operation.
