## Electro Polishing Machine For Gold & Silver [ 9 Ltrs ]

### Description :

- Ankitst Electro Polishing Machine utilizes an electrochemical process to effectively remove metal from articles.
- Enhances surface finish by reducing surface roughness, leveling micro-peaks, and valleys on the article.
- Widely used in the production of jewelry for polishing irregularly-shaped objects due to its ease of operation.
- Efficiently polishes intricate portions of articles, ensuring a finely polished result.
- Easy and simple to operate, making it accessible for a variety of users.
- Slow metal removal ensures effective coverage in low current density areas.
- Removed metal is dissolved in a liquid through a refining process, achieving a high dissolution rate (95% to 98%).
- The process is cost-effective, contributing to the reduction of overall production costs.
- Capable of polishing Gold, Silver, and Brass Jewelry in the same machine at different times with varying chemical parameters.

### Technical Specifications:-

Particular	Details
Capacity	9 Ltrs
Hood Rod	6
Hook Layers	Single
J hooks	12
Zig (Provided)	2
Zig (working at time)	1
Media Capacity	9 kgs
Input Voltage	230V, 50Hz
Capacity In Grams	80 -100
Dimension	19"x31"x28"
