

Sprue Grinding

Wet Sprue Grinding Machine

Description :

The Wet Sprue Grinding Machine represents a paradigm of efficiency in achieving precise sprue grinding tasks while adeptly handling wet materials. Engineered with cutting-edge components, this machine ensures superior performance and cleanliness in wet grinding operations.

- Efficient Dust Collector: Powered by a powerful water circulation in SS Hood, efficiently collecting dust and debris during the wet grinding process.
- Specialized Filtration: Incorporating a 5-micron filter bag, the machine maximizes particle recovery, maintaining a clean and conducive working environment throughout wet grinding tasks.
- 1/2HP Pedestal Motor: Operated by a robust 1/2HP motor at 2800rpm, the machine utilizes a 7-inch long grinding spindle and wheel, facilitating precise and efficient wet sprue grinding.
- Material Adaptability: Tailored to handle wet materials such as SS Hood, this machine accommodates varying thicknesses and incorporates a light reflector feature for enhanced operational visibility.
